Identify the material being cut

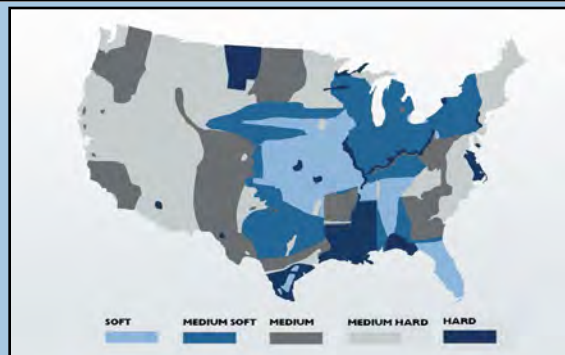

Many different types of rocks are used as aggregates in building materials. Hard aggregates require blades with soft segment bonds. This allows segment to wear normally and to bring new sharp diamond grit to the surface. Softer aggregates will not dull diamond and grit as quickly, so harder segment bonds are needed to hold the diamonds in place long enough to use their full potential. The map provides general information on the aggregate hardness by geography in the U.S.

True Color Concrete Hardener

- Surface applied dry shake color and surface hardener produces a hard, durable, abrasion resistant surface
- Formulated to create a uniform consistent color

Application:

- Apply using the broadcast method after concrete has been placed, screened, floated and excess bleed water has disappeared from the surface.
- Use alone or together with Bon's True Color™ Release Agent.
- Coverage requirements vary according to the color selected and intended use.
- Apply at a rate of 60 lbs. per 100 sq. ft.
- Lighter colors may require as much as 100 lbs. per 100 sq. ft.

True Color Release Agent

- Specially formulated, colored powder that prevents texture mats and rollers from adhering to freshly placed concrete
- Texture mats will not work without the use of release agent

Application:

- Apply to concrete and the texturing tool after coloring application and while the concrete is in a plastic state
- Generally 3.5 lbs. of material is required per 100 sq. ft.
- 5 gallon container covers approximately 800-1000 sq. ft.

Ironoxx™ Integral Concrete Pigment

- Pigments are manufactured to the strictest quality control standards to assure uniform and consistent coloring
- Recommended for coloring ready-mix concrete and other masonry products including concrete blocks and pavement
- Available in 10 and 25 lb. disintegrating bags

Application:

- Disintegrating bags can be added directly to the concrete
- Approximate mix ratios:
 - 1 or 2 lbs. of Ironoxx™ per 94 lb. bag of cement for light shades
 - 2 or 4 lbs. of Ironoxx™ per 94 lb. bag of cement for medium shades
 - 5 or more lbs. of Ironoxx™ per 94 lb. bag of cement for darker shades
- Using grey cement will result in "buff" or softer color
- Using white cement will result in "brighter" or pastel color
- To ensure consistent color, keep all variables the same from batch to batch
- Variations in the mix design, mixing time, and curing conditions, will affect the final color
- Always perform a sample batch to confirm acceptability the color result
